SUMMARY

Software engineer with four years of experience spanning direct customer communication, quality assurance, and full-stack engineering, now moving toward product management. I have spent my career translating what users need into features that ship, whether that meant advocating for customers from the QA seat or building the solutions myself as an engineer. I am drawn to product management because it brings together the work I already do well: listening closely to users, collaborating across product, design, and engineering, and building things that make people's lives easier.

RELEVANT SKILLS

Product & Analytical: Cross-functional Collaboration, Data-Informed Decision Making, A/B Testing & Experimentation awareness, AI-Assisted Workflows, Process Improvement, User-Centered Problem Solving, Agile/Scrum

Technical: JavaScript, PHP, Vue, React, Laravel, SQL, Postman, Figma, Git, JIRA, Cypress

PROFESSIONAL EXPERIENCE

Decisions *(formerly ProcessMaker)* | Mar 2022 – Present

Software Engineer (Jan 2024 – Present) | Junior Software Engineer (Mar 2022 – Jan 2024)

- Led the first comprehensive API security audit across the platform. Reviewed ~700 endpoints, pairing AI-assisted analysis with manual validation in Postman to surface ~250 vulnerabilities. Owned the initiative end-to-end and directly informed engineering's remediation priorities.
- Collaborate with product managers, designers, and engineers to develop 15+ high-impact features for an enterprise SaaS platform, contributing across the full cycle from design discussion through delivery.
- Deliver regular feature demos to stakeholders and engineering managers, walking through how features work, sharing status updates, and gathering feedback to guide next steps.
- Investigated and resolved 150+ high-priority bugs and QA issues, including user-reported problems, protecting product experience and system reliability.
- Build and maintain a library of reusable frontend components based on Figma designs, translating design intent into consistent, production-ready UI.

Written Word Media | Aug 2017 – Mar 2022

QA Lead (2019 – 2022)

- Owned the internal QA process for tech releases end-to-end — assigning, supervising, and evaluating testing across the team, functioning as the bridge between engineering output and real-world reliability.
- Partnered directly with developers to reproduce, document, and prioritize customer-reported bugs and feature requests, turning raw customer feedback into clear, actionable engineering requirements.

Content Specialist (2017 – 2019)

- Managed high-volume, direct communication with authors (Written Word Media's core customers), resolving concerns and surfacing recurring feedback themes — early, foundational experience in understanding what users need and why.
- Rebuilt and updated code for 50+ email templates (HTML, CSS, SailThru logic) to increase reader engagement, an early hands-on lesson in how small product changes move real metrics.

EDUCATION

Full Stack Web Development Coding Bootcamp — UNC Chapel Hill | Jan – Jul 2021

Bachelor of Arts — UNC Chapel Hill | Aug 2011 – May 2015
